

JavaScript I

Variables, operators and Pseudocode

Objective

- Router
- Router component
- Router install

Router in React

- ❖ **React Router** is a standard library for routing in React
- ❖ It enables the navigation among views of various components in a React Application, allows changing the browser URL, and keeps the UI in sync with the URL.

Installing React Router

- ❖ React Router can be installed via npm in your React application. Follow the steps given below to install Router in your React application:
 - **Step 1:** cd into your project directory.
 - **Step 2:** To install the React Router use the following command:
 - *npm install -save react-router-dom*
 - **Step 3:** import
`import {BrowserRouter as Router, Switch, Route, Link } from "react-router-dom";`

React Router Components

❖ The main Components of React Router are:

- **BrowserRouter:** It is the parent component that is used to store all of the other components.
- **Route:** Route is the conditionally shown component that renders some UI when its path matches the current URL.
- **Link:** Link component is used to create links to different routes and implement navigation around the application
- **Switch:** Switch component is used to render only the first route that matches the location rather than rendering all matching routes.

```
export default function BasicExample() {
  return (
    <Router>
      <div>
        <ul>
          <li>
            <Link to="/">Home</Link>
          </li>
          <li>
            <Link to="/about">About</Link>
          </li>
          <li>
            <Link to="/dashboard">Dashboard</Link>
          </li>
        </ul>

        <Switch>
          <Route exact path="/">
            <Home />
          </Route>
          <Route path="/about">
            <About />
          </Route>
          <Route path="/dashboard">
            <Dashboard />
          </Route>
        </Switch>
      </div>
    </Router>
  );
};
```

Summary

- Router
- Router component
- Router install
